

Lane Control Sign Boards

The Lane Control Sign boards are high intensity LEDs boards designed to display various types of Lane signs that can be used for various traffic applications including Tunnels. The imagined symbols of the Variable lane Sign is combination of several lane signal indicators and that illuminate the specific sign that is required.

Some of the features:

- Available in required sizes.
- The LED based Matrix type
- Display: Directional Arrows and Cross, LEDs are exposed without front screen. The LEDs are protected with high quality optical lens that ensures required IP specification and avoids reflection & refraction.
- Housings made of high class Mild Steel or as required by the customer sizes.
- Protection: IP 65
- Communication: RS 485/RS232/GPRS/Ethernet
- Power Supply: 230V AC
- Operational Temperature: 10°C to +60°C
- Compliance: As per BS EN 12966
